

## “T” Screen 9603 Series by 3-G Mermet—

Series of high-quality, woven, PVC-coated fiberglass fabrics. “T” SCREEN offers the benefits of both light and dark yarns in one fabric. Control both glare and heat, while still maintaining a view of the outside world. The most efficient use of “T” SCREEN is with the darker side facing your interior and the lighter side toward the outside. Light colors offer better heat control because they reflect heat. Dark colors equal better glare control because they absorb light. When specifying, indicate which side faces room interior. In all three series, slat hems are heat-sealed. 61”, 78” and 98” roll widths. Average 12 oz./sq. yd., .026” thick. Fire rating: NFPA-701 both small- and large-scale. Approximate openness factor is 3%. “T” SCREEN also offered in 1% openness factor— See “T” Screen 9601 Series.

*Fabric samples below show the dark side on the left and the light side on the right. The more dense a fabric is, the darker the appearance.*
