

EXTERIOR ROLLER SHADES

Flexshade® ZIP 127 or ZIP XL with Solar Panel

OUTDOOR SOLAR CONTROL

FlexShade® ZIP 127 Budd Dairy Food Hall – Columbus, OH

Motor, solar panel
and remote

- Simple installation of a fully integrated, plug-and-play solution — no line voltage required!

FEATURES

- FlexShade® ZIP 127 with Solar Panel and FlexShade® ZIP XL with Solar Panel provide energy-efficient automation for motorized roller shades, integrating a quiet DC motor, solar panel, and embedded battery in a pre-wired system.
- No line voltage connection is required: ideal for applications where wiring access is limited, such as garages, patios, porches, pool houses, and outdoor commercial food service areas. Advanced power management enables charging even without direct sunlight, and adjustable wings help ensure the solar panel faces the sun for maximum power output.
- Key features include soft-start/stop, intermediate positions, and smart home or radio control.
- Fabric is retained in the side channels by continuous coil zipper-like retention system.
- Functions as an operable insect screen or interior space divider.
- Provides wind resistance and smooth operation.

- Battery is housed in the solar panel, not in the shade roller.
- Quiet motor operation with soft-start and soft-stop functionality.
- Up to 35 days of battery life with standard use (2 cycles/day).
- Slim 1 5/8" (42 mm) side channels mount to jamb or face of opening.
- Weighted hem bar stabilizes shade during operation.
- Compatible with Bond Bridge Pro and Breeze Pro wind, rain, and sunlight sensor.

OPTIONS

- Hardware features powder coat finishes with a lightly textured surface in black, ivory, bronze, white, sand, and slate.
- Custom powder coat colors are also available.
- Supports smart home or radio control systems.
- Available with Radio Technology Somfy (RTS) obstacle detection motors or standard motors.

FABRIC OPTIONS

Choose from a wide range of fabric colors, textures, and opacities — or customize with graphics, patterns, or color matching.
