

GC4 Controller

Overview

The IntelliFlex® GC4 Controller reduces wiring by allowing the operation of up to four motors from a single control output as well as the ability to daisy chain multiple GC4s to create larger groups. The GC4 provides group control of these motors and all motors respond to the control output in the same way. Product is not suitable for applications where individual control of each motor is required. Comes with pluggable terminal blocks for easy wiring and is compatible with the 1MC, 4MC, or any line voltage double throw wall switch.

Features

- Extends control output to up to 4 standard AC motors
- Pluggable connectors for easy wiring
- Comes installed in a 8x8x4" box

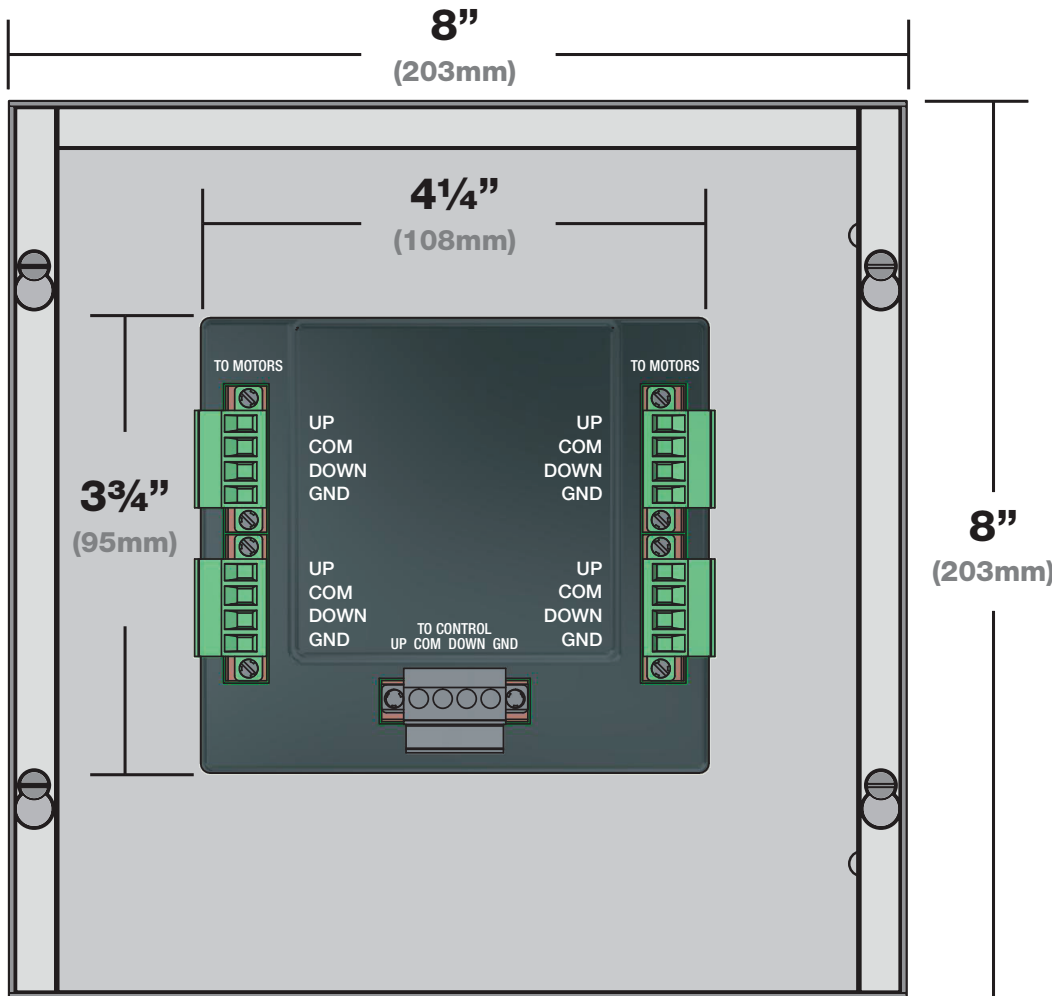

TECHNICAL SPECIFICATIONS

Input Voltage: 120V AC/60Hz

Output Voltage: 120V AC/60Hz

Max Output Current: 4.0 Amps per Motor
