Installation Instructions

Cineperm Permanently Tensioned Projection Screen by Draper

Frame Assembly

Standard Frame (Do NOT Suspend)—

1. Lay out frame pieces on floor, by matching up color-coded tape near corners. Snaps should be facing up.
2. Assemble frame (see Fig. 1). If necessary gently tap frame ends with a rubber mallet to make sure castings are fully seated.

Truss Frame—

1. Unfold and lay out pieces on floor, by matching up color coded marks. Look all hinges (see Fig. 1). Snaps should be facing up.
2. To increase frame rigidity, hinges on top and bottom sections have rivnuts marked with red and green. Insert a Handy Crank through the threadless rivnut (red) and tighten into the threaded rivnut (green).
3. Apply small sections marked “Stiffener Bars” to back of bottom frame section, using 8 Handy Cranks. These eliminate sag on large suspended frames. Failure to use all Handy Cranks may result in screen frame damage. Turn bottom frame section over so snaps face up.
4. Repeat step 3 for top frame section.
5. Join top and bottom sections to Stage Left and Stage Right, using 2 Handy Cranks on each of the 4 corners. Match numbers on white labels. NOTE: No Handy Crank should protrude outside screen frame.
6. Attach surface (see “Surface Installation”), and suspend using appropriate materials (provided by others to meet specific installation requirements).

Frane Installation (Standard Frame)

Outside (Face) Mount—

1. Drill mounting holes in frame (see Fig. 2).
2. Mark wall and drill holes to correspond with those in the frame.
3. Enlarge holes in frame side furthest from wall to allow screw heads to pass through (see Fig. 2). Do not allow screw heads to remain outside the frame: overtightening could bend frame and affect screen flatness.

Inside (Jamb) Mount—

1. Place frame assembly in opening to check for a snug fit. If frame is too large, opening may have to be enlarged. If frame is too small or does not sit square in the opening, shims and caulking may be required.
2. Drill mounting holes in frame, and enlarge the first holes to allow screw heads to pass through (see Fig. 3). Do not allow screw heads to remain outside the frame: overtightening could bend frame and affect screen flatness.
3. Drill holes in jamb.
4. Attach frame using appropriate fasteners for mounting surface (provided by others).
5. Use caulk to ensure there is no light leakage around edges of frame.

Surface Installation

1. Carefully remove surface from cardboard tube and unroll onto a clean cloth or paper.
2. Engage snaps in each corner, then secure rest of screen snaps.

Inside (Jamb) Mount

1. Open Opening.
2. Anchor bolt by others. Clearance hole in outer wall by others. Locate between snaps.
3. Snap on viewing surface
