Assembly/Mounting Instructions
Clarion Permanently Tensioned Projection Screen by Draper

Caution
① Read instructions through completely before proceeding.
② Follow instructions carefully. Installation contrary to instructions invalidates warranty.
③ When lifting assembled screen, do not lift at only one corner; lift at both corners. Lifting by one corner could result in damage to the screen frame, especially on large screens.
④ Screen should be accessible for complete removal should fabric become damaged or should other service be required.
⑤ Screen should be installed level (using a carpenter's level).
⑥ Nothing should be fastened to screen frame or viewing surface.
⑦ Make sure you have received all parts (see parts list below and exploded diagram on page 2).
⑧ Screws required for screen assembly; drill and screwdriver needed for attachment to wall.
⑨ The ideal temperature range for assembling folding screens to prevent damaging the surface is 68°-78° F (20°-26° C). Assembling below recommended temperatures may damage surface and void warranty.

NOTE: Screen has been thoroughly inspected and tested at factory and found to be operating properly prior to shipment.

Clarion—Hardware and Parts List

- Frame Extrusions - 4
- Frame Corners - 4
- Z-Brackets - 2
- Plastic Tubing - 4
- Surface Retention Extrusions - 4
- Viewing Surface - 1
- Self-tapping Screws - 8

Frame Preparation
① Clean area and place frame assembly pieces face down. Snap plastic corner pieces into ends of aluminum frame extrusions as indicated in Figures 1 through 4.

Figures 1

① Check to verify that all four (4) plastic corners are seated securely in aluminum frame extrusion lengths (see Fig. 5). Lock in place using eight (8) self-tapping screws.

Caution: Do not over-tighten fasteners—over-tightening could cause damage to the frame corners.

Figure 5

(Continued on Page 2)
Surface Preparation

1. Move frame assembly out of the way, unroll viewing surface and place on smooth/clean surface. (Orient viewing surface so that folded side of hem is visible.)
2. Insert plastic tubing inside pocket formed by hem on all 4 edges of viewing surface (see Fig. 6).
3. Carefully slide surface retention extrusion (rounded edge visible) along hem and onto surface on all four edges of fabric (see Fig. 7).

Caution: Do not allow fabric to snag on the ends of the extrusions. If the screen fabric is not parallel with the surface retention extrusion, then it may slit and tear during installation. Please Note: To make this step easier, pinch the end of the pocket closed before sliding it into the surface retention extrusion.

Surface to Frame Assembly

1. Return frame onto clean surface, face down, and drape completed surface assembly over completed frame profile with rounded edge of surface retention extrusion visible.
2. Insert any side of surface to notch #1 on corresponding side of frame extrusion (see Fig. 8).
3. Insert opposite side of surface to notch #1 of frame extrusion.
4. Repeat steps 2-3 with remaining edges of surface.
5. Ensure surface retention extrusions are centered lengthwise in tension slots on all 4 edges of surface.
6. If additional tension is desired or required over time, adjust surface one edge at a time to tension notch #2.

Please Note: It is not necessary to adjust more than one edge at a time to increase surface tension.

Corner Reinforcement

1. If screen is being flown (suspended) or is over 120" (viewing area) height or width, install Corner reinforcement Gussets to all four corners (see Fig. 9).

Mounting Screen to Wall

1. Determine height at which screen is to be mounted.  
   Please Note: Top edge of screen frame will be located ½" above mounting bracket hole centerline when mounted to wall.
2. Mark hole centerline so that both Z-brackets can be mounted parallel and at equal height.
3. Install Z-brackets so that the outermost edges are safely within the overall length of the aluminum frame extrusion to allow for minor horizontal screen adjustments (hardware for mounting Z-brackets to wall is not supplied).
4. Position screen slightly above Z-brackets on wall (see Fig. 10).

Please Note: When lifting screen, do not lift at only one corner; lift at both corners. Lifting by one corner could result in damage to the screen frame, especially on large screens.

Surface Preparation

1. Move frame assembly out of the way, unroll viewing surface and place on smooth/clean surface. (Orient viewing surface so that folded side of hem is visible.)
2. Insert plastic tubing inside pocket formed by hem on all 4 edges of viewing surface (see Fig. 6).
3. Carefully slide surface retention extrusion (rounded edge visible) along hem and onto surface on all four edges of fabric (see Fig. 7).

Caution: Do not allow fabric to snag on the ends of the extrusions. If the screen fabric is not parallel with the surface retention extrusion, then it may slit and tear during installation. Please Note: To make this step easier, pinch the end of the pocket closed before sliding it into the surface retention extrusion.

Surface to Frame Assembly

1. Return frame onto clean surface, face down, and drape completed surface assembly over completed frame profile with rounded edge of surface retention extrusion visible.
2. Insert any side of surface to notch #1 on corresponding side of frame extrusion (see Fig. 8).
3. Insert opposite side of surface to notch #1 of frame extrusion.
4. Repeat steps 2-3 with remaining edges of surface.
5. Ensure surface retention extrusions are centered lengthwise in tension slots on all 4 edges of surface.
6. If additional tension is desired or required over time, adjust surface one edge at a time to tension notch #2.

Please Note: It is not necessary to adjust more than one edge at a time to increase surface tension.

Corner Reinforcement

1. If screen is being flown (suspended) or is over 120" (viewing area) height or width, install Corner reinforcement Gussets to all four corners (see Fig. 9).

Mounting Screen to Wall

1. Determine height at which screen is to be mounted.  
   Please Note: Top edge of screen frame will be located ½" above mounting bracket hole centerline when mounted to wall.
2. Mark hole centerline so that both Z-brackets can be mounted parallel and at equal height.
3. Install Z-brackets so that the outermost edges are safely within the overall length of the aluminum frame extrusion to allow for minor horizontal screen adjustments (hardware for mounting Z-brackets to wall is not supplied).
4. Position screen slightly above Z-brackets on wall (see Fig. 10).

Please Note: When lifting screen, do not lift at only one corner; lift at both corners. Lifting by one corner could result in damage to the screen frame, especially on large screens.

Please Note: To avoid damage to the frame corners, be sure to support a minimum of two (2) corners when lifting or transporting screen.
