If you have any difficulties installing or servicing your Twin Pull Clutch FlexShade®, call your dealer or Draper, Inc.
Field Adjustments

Each Draper Solar Control Shade is tested to ensure proper operation. Even with this testing, some field adjustments may be needed for telescoping. If the shade is telescoping, place a piece of high quality gaffer tape about 1" wide on the exposed roller (where the fabric will cover it) on the side that the fabric will be drawn toward. For example: if the fabric is tracking to the left, place the tape on the right side.

Cleaning and Maintenance

Window covering products manufactured by Draper, when properly installed, should require no operational maintenance or lubrication. Most of Draper's standard fabrics may be cleaned at the window by vacuuming with a soft brush attachment. They also may be cleaned by using a sponge or soft cloth and mild solution of warm soapy water. A mild dishwashing liquid is recommended. A clean dry cloth is recommended for the metal finish.

Please Note: Exceptions are Flocké and Phifer SW7000 fabrics, which must be cleaned with a dry art sponge.
Section 1 - Twin Pull Top Stopper

Ensure ribs are inserted in grooves of tube.

Insert stopper when fabric is at desired top position.

Section 2 - Twin Pull Bottom Stopper

Ensure ribs are inserted in grooves of tube.

Insert stopper when fabric is at desired top position.

After installing shade, adjust bottom stopper.
